1

If you catch COVID-19, ask your doctor immediately about **monoclonal antibodies, Molnupiravir, or Paxlovid**. Some SCD Warriors may be eligible for certain treatments.

2

With SCD, pain can be triggered by many things. However, there are very few reported cases of pain crisis after receiving the COVID-19 vaccine.

3

With the rise of new COVID-19 variants, it is **possible to get COVID more than once**. The weakened immune system of SCD Warriors puts them at even greater risk of getting severe COVID.

4

Unvaccinated SCD Warriors are at an **increased risk for acute chest and pain crises** if they contract COVID-19.

5

There is **NO need to adjust your SCD medications** when receiving the COVID-19 vaccine or if you are infected with COVID-19.

STAY SAFE. STAY HEALTHY. STAY WELL.
